

**TeleAlarm® ManDown
Position sensor
Maximum security in the
workplace and at home**

TeleAlarm® ManDown position sensor

Automatic radio emergency call system for accidents and crisis situations in the workplace and at home.

Employees are exposed to safety and accident risks to a greater or lesser extent, depending on the type of work they do. A responsible company management will therefore give the highest priority to safety in the workplace.

According to studies carried out by SUVA, the probability of making a mistake is greater for people who work alone. At the same time they are exposed to a significantly greater risk of not receiving help promptly in a crisis or accident situation. The TeleAlarm® ManDown wireless emergency call system reduces this risk to an absolute minimum.

Original-size ManDown position sensor

The person working alone carries a ManDown position sensor. If an accident or a critical situation occurs, they can either push the alarm button themselves, or the alarm is triggered automatically, i.e. without the person taking any action.

With the TeleAlarm® radio alarm system, help is summoned without delay, either by a link from the individual workplace to the outside world, or via an internal alarm system. An automatic alarm is

triggered if the person concerned remains lying on the ground after an accident. The term 'position alarm' is therefore also used in this connection.

TeleAlarm® ManDown makes rapid and efficient intervention possible, optimising safety at work for the individual employee and also for the company as a whole.

TeleAlarm® ManDown

- involuntary personal alarm
- automatic call triggering
- can be set to manual alarm triggering
- with or without pre-alarm
- protected European personal-alarm frequency
- splash-proof
- battery-level monitor
- inexpensive
- simple installation
- Swiss product
- customer-specific alarm broadcast, depending on the alarm organisation

TELEALARM® SINCE 1956

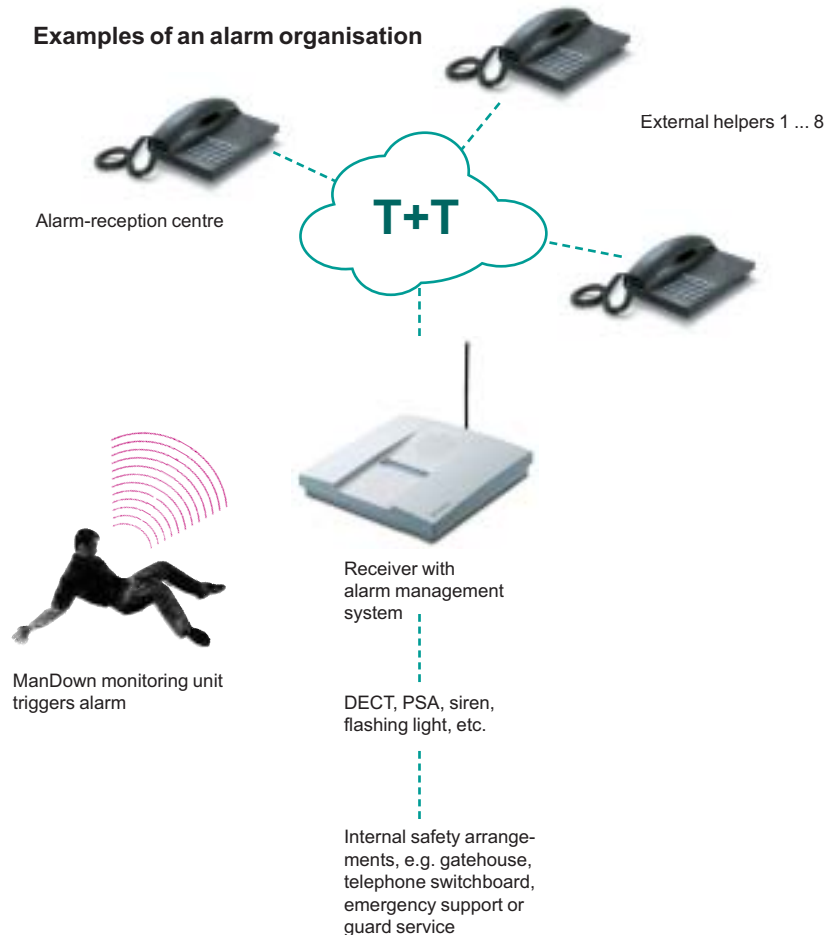

Telealarm was founded in Geneva in 1956 under the name Telectronic, as the first company in the TeleAlarm® Group. TeleAlarm® products in the area of alarms for care services and other professional applications quickly became the standard for quality and reliability in non-acute care and in personal protection. The head office of the company is at La Chaux-de-Fonds. TeleAlarm has ISO certification (ISO 9001:2000).

In 2001 the Group took over the company Antenna AB, based in Sweden. Together with several branches throughout the whole of Europe, the market position was thereby again significantly strengthened.

Cornerstones of the company's success are a high level of competence, and innovative new and further developments in the area of wireless personal emergency call systems in the professional and private fields.

The continuous monitoring provided by the TeleAlarm® ManDown radio alarm system can be suitable for work in the following areas, for example: production plants, metal-working industry, warehouses, laboratories, wastewater treatment plants, exposed sales outlets, etc.
